

Nº 101

Scopuloides leprosa
(Bourdot & Galzin) Boidin, Lanq. & Gilles

Figures 1–9

Peniophora radicata subsp. *leprosa* Bourdot & Galzin 1913 [2 : 394] ≡ *Peniophora leprosa* (Bourdot & Galzin) Bourdot & Galzin 1928 [3 : 312] ≡ *Phanerochaete leprosa* (Bourdot & Galzin) Jülich 1979 [5 : 334] ≡ *Scopuloides leprosa* (Bourdot & Galzin) Boidin, Lanq. & Gilles 1993 [1 : 200]

Basidiome effused, sometimes orbicular, soft membranaceous to subcereous and more or less separable when fresh, becoming crustose and strongly adherent when dry, 0.1–0.5 (1) mm thick.

Hymenophore smooth to irregular, rarely slightly grandinoid, pubescent for the projecting cystidia, whitish to yellowish alutaceous, ochraceous, often finely and sparsely dotted, when well developed deeply cracking on drying.

Context thickening, whitish to yellowish.

Subiculum scanty to well developed but anyway thin, fibrillose to fibrose.

Margin abrupt or thinning out, sterile, pruinose, somewhat pulverulent to fibrillose, discolour, whitish.

Rhizomorphs sometimes present at the margin or in cracks of the substrate, up to 1 mm thick, pilose, soft, whitish, with a compact yellowish core when well developed.

Hyphal system monomitic.

Subhymenial hyphae building a thickening layer, compactly arranged, almost indistinct, (2) 2.5–4 (5) µm in diam., with simple septa and thin to thickening wall, hyaline.

Subicular hyphae 3–5.5 (9) µm, infrequent, with simple or rare fibulate septa hyaline, with thin or thickening wall, smooth or strongly encrusted and ending at the margin in long lamprocystidia-like elements and tapering hyphae.

Rhizomorphs structured, built up by 1) a core of 4–13 (16) µm wide

hyphae, regular, distinct, thin to thick-walled, with distant simple and fibulate septa (wider hyphae often with light yellowish homogeneous content); **2)** an outer layer of strongly encrusted 2–4 µm wide pseudoskeletal hyphae becoming dichotomously branched and projecting with tapering ends, with thickening to thick walls, hyaline. **Cystidia** present on surface as clavate to more or less capitate elements with smooth or only coarsely encrusted top, and eventually some long lamprocystidia-like elements.

Cystidia of two kinds: **1)** lamprocystidia, 40–80 (100)×(5) 8–14 µm, common, enclosed or projecting up to 50 µm, fusiform, becoming longer (~200 µm) and sometimes branched at the margin and in subiculum; **2)** cylindrical leptocystidia with obtuse or slightly swollen apex, infrequent, up to 150 (200) µm long and 8–10 µm in diam., enclosed and projecting up to 90 µm, often with some secondary simple septa.

Basidia narrowly clavate, 20–30 (40)×4–6 µm, with a simple basal septum; 4 sterigmata up to 5 µm long.

Basidiospores ellipsoid with a slightly flattening adaxial side, (3.5) 4–5.5 (6)×(2) 2.5–3 µm, smooth, thin-walled, hyaline, 1–2 guttulate, 1–nucleate.

Chemical reactions: CB–; IKI– (lamprocystidia dextrinoid teste Wilhelm & Duc [4]); SA–.

Incrustation: granular crystalline matter strongly adhering to cystidia and hyphae at the margin and outer layer of rhizomorphs.

Voucher specimens

FRANCE — **Aveyron** – Bozouls, Trou d'Enfer, on bark of a lying, decayed branch of a deciduous tree, leg. E. Martini, 30.X.2004 (em-8529) — **Pyrénées-Orientales** – Serdinya, Riv.de Baillmarsane, on wood of a decayed branch of a deciduous tree, leg. E. & F. Martini, 28.X.1995 (em-5804) — **Rhône** – Sérézin-du-Rhône, Ile de la Table Ronde, on wood of a lying, rather hard branch of a deciduous tree, leg. E. Martini, 13.X.2015 (em-12786)

SWITZERLAND — **Thurgau** – Berlingen, Wildbach, on wood of a lying, decayed branch of *Fagus sylvatica*, leg. E. Martini, 5.X.2006 (em-9140) — **Ticino** – Arzo, Perfetta, on strongly decayed wood of a deciduous tree, leg. E. Martini, 15.X.1994 (em-5580) – Casima, Cugnoli, on wood of a lying, decayed branch of *Corylus avellana*, leg. F. Delmenico, 15.XI.2008 (em-11940) – Casima, Ponte Breggia, on wood of a lying, decayed branch of *Salix caprea*, leg. F. Delmenico, 30.X.2005 (em-9632) – *ibid.*, on lying, decayed wood of *Fraxinus excelsior*, leg. F. Delmenico, 28.X.2006 (em-9637) – Losone, San Lorenzo, on wood of a twig of *Phyllostachys* sp., leg. E. Zenone, 7.XI.1992 (em-3333) – Meride, Bolle, on wood of a lying, rather hard trunk of *Prunus avium*, leg. E. Martini, 13.X.2007 (em-10171) – Meride, Crocifisso, on wood and bark of a lying, decayed branch of a deciduous tree, leg. E. Martini, 27.X.2007 (em-10275) – Meride, Fontana, on wood of a lying, rather hard branch of a deciduous tree, leg. E. Martini, 2.IX.2006 (em-8845) – Meride, Meriggio, on wood of a lying, rather hard branch of *Fagus sylvatica*, leg. E. Martini, 25.VIII.2007 (em-10032) – Morbio Superiore, Rovagina, on wood of a lying, decayed trunk of a deciduous tree (*Fraxinus excelsior*?), leg. F. Delmenico, 25.IV.2009 (em-11977) – Novazzano, Valle della Motta, on bark of a lying, decayed branch of *Salix alba*, leg. E. Zenone, 28.I.1991 (em-3431) – *ibid.*, on wood of a lying, decayed branch of *Clematis vitalba*, leg. E. Zenone, 28.III.1991

(em-3429) – *ibid.*, on wood of a lying, strongly decayed trunk of *Alnus incana*, leg. E. Zenone, 24.X.1991 (em-3097) – *ibid.*, on wood of a standing, hard trunk of *Euonymus europaeus*, leg. E. Zenone, 28.XI.1991 (em-3428) – *ibid.*, on wood of a lying, decayed trunk of *Salix sp.*, leg. E. Zenone, 28.VI.1992 (em-3207) – *ibid.*, on *Phellinus sp.*, leg. E. Zenone, 22.I.1993 (em-3427)
