Lindtneria leucobryophila

Figures 1–9

Thelephora leucobryophila Henn. 1898 [7 : xcv] \equiv *Corticium leucobryophilum* (Henn.) Bourdot & Galzin 1928 [5 : 229] \equiv *Cristella leucobryophila* (Henn.) Parmasto 1965 [11 : 223] \equiv *Trechispora leucobryophila* (Henn.) Liberta 1966 [9 : 318] \equiv *Lindtneria leucobryophila* (Henn.) Jülich 1977 [8 : 418] \equiv *Mycolindtneria leucobryophila* (Henn.) Rauschert 1988 [14 : 53]

= *Sistotrema sulphureum* var. *variecolor* Bourdot & Galzin 1914 [4 : 274] teste Liberta [10], Boidin [2] \equiv *Sistotrema variecolor* (Bourdot & Galzin) Wakef. & A. Pearson 1920 [17 : 320] \equiv *Sulphurina variecolor* (Bourdot & Galzin) Pilát 1953 [13 : 109] \equiv *Phlebiella variecolor* (Bourdot & Galzin) Bondartsev & Singer 1953 [3 : 473] \equiv *Cristella variecolor* (Bourdot & Galzin) M.P. Christ. 1960 [6 : 97] \equiv *Trechispora variecolor* (Bourdot & Galzin) Liberta 1966 [9 : 319]

= *Hypochnus flavoaurantius* Traverso 1908 [15 : 553] teste Liberta [10]

= *Corticium petrophilum* var. *dispar* Bourdot & Galzin 1928 [5 : 230] teste Liberta [10]

= *Corticium petrophilum* Bourdot & Galzin 1928 [5 : 230] teste Liberta [10] \equiv *Phlebiella petrophila* (Bourdot & Galzin) Bondartsev & Singer 1953 [3 : 51] \equiv *Cristella petrophila* (Bourdot & Galzin) M.P. Christ. 1960 [6 : 98] \equiv *Trechispora petrophila* (Bourdot & Galzin) Liberta 1966 [9 : 319]

= *Lindtneria flava* Parmasto 1968 [12 : 408] teste Trichies [16] \equiv *Mycolindtneria flava* (Parmasto) Rauschert 1988 [14 : 54]

Basidiome effused, adherent to separable, hypochnoid to soft membranaceous, up to 0.3 mm thick, fragile when dry.

Hymenium varying between collections: smooth, finely tuberculate, colliculose, odontoid, raduloid, subporoid, hymenial surface somewhat furfuraceous to tomentose, whitish, cream, light yellowish, yellow, yellow-orange, sometimes with darker spots.

Subiculum araneose, concolorous or weakly darker than the hymenial

surface, whitish, yellowish, ochraceous.

Rhizomorphs present, often hydden in the substratum and subiculum, thin, branched, pubescent, light yellowish brown to yellow.

Hyphal system monomitic; all hyphae thin-walled and hyaline. Subhymenial hyphae slightly irregular, somewhat swollen, mostly fibulate, 3–6 (9) μm in diam.; subicular hyphae loosely interwoven, normally branched at right angles, regular, 3–5 μm in diam., mostly with simple septa but some fibulate septa always present.

Rhizomorphs frequent, thin, of two kinds: some up to 15 μm in diam., hyaline, build up by few 3–4 μm wide hyphae, often nodose-septate; some up to 100 (150) μm broad, made by sausage-cylindrical hyphae up to 35 μm in diam. surrounded by 3–5 (8) μm wide hyphae, mostly simple-septate or with some rare clamped septa, thin-walled; some hyphae at the surface may swell in a terminal or intercalar globose to ellipsoid cell 10–14 μm in diam.

Cystidia absent.

Basidia strictly clavate to subcylindrical, sometimes slightly constricted in the middle, 30–50×7–10 μm ; 4 sterigmata up to 6.5 μm long.

Basidiospores ovoid to narrowly ellipsoid, tapering at the base, (5.5) 6–9.5 (10)×4–5.5 (6.5) μm , Q = 1.2–2, wall almost smooth or with sparse aculei or tubercles to rough or irregularly aculeate-tuberculate, sometimes with crest-like projections, with thickening wall, hyaline, with a large guttula with oily yellowish content; apiculus prominent.

Chemical reactions: IKI–; CB: basidia with cyanophilous granulation; spores cyanophilous.

Incrustation: some hyphae on surface of rhizomorphs coarsely encrusted by hyaline very small granules.

Specimens examined

GERMANY — Hessen — NSG Kühkopf, Oberrheinebene, on wood of a lying, decayed trunk of *Prunus spinosa*, leg. H. Grosse-Brauckmann, 20.X.1980 (NEU JK 4610)

SWITZERLAND — Neuchâtel — Neuchâtel, Forêt de Champréveyres, on bark of a lying, decayed twig of a broadleaved tree, leg. J. Keller, 3.XI.1986 (NEU JK 4014) — Ticino — Brissago, Isole, on soil, leg. E. Zenone, 14.V.1987 (em-1209) — Casima, Cugnoli, on wood of a lying, decayed branch of *Carpinus betulus*, leg. F. Delmenico, 24.III.2007 (em-12456) — Cavergno, Faula, on soil under stones, leg. E. Martini, 5.I.2015 (em-12433) — Meride, Bolle, on bark of a lying, rather hard trunk of *Fraxinus excelsior*, leg. E. Martini, 13.X.2007 (em-10197) — Zürich — Zürich, Bot. Garten, on soil, leg. H. Gsell, 14.III.1988 (NEU JK 4387) — *ibid.*, on soil, leg. H. Gsell, 15.III.1989 (NEU JK 4440)
